

# THE GREAT AMERICAN ECLIPSE

**For the first time since 1979, a total eclipse of the Sun is coming to the continental United States, and for the first time since 1918, it is crossing the country from coast to coast.**

On Aug. 21, 2017, people across the United States will see the sun disappear behind the moon, turning daylight into twilight, while revealing streamers of light streaking through the sky around the silhouette of the moon. On that day, America will fall under the path of a total solar eclipse.

The Great American Total Solar Eclipse will darken skies all the way from Oregon to South Carolina, along a stretch of land about 70 miles wide. People who descend upon this "path of totality" for the big event are in for an unforgettable experience.

*Note: Over Southern California, the eclipse magnitude will be roughly 63%. Be sure to wear proper eye protection while viewing the eclipse!*

Chicago Title has eclipsed the competition for over 170 years!
